SUMMARY

Software Engineer specializing in Java, Spring Boot, microservices and Angular with experience in building scalable distributed systems with a focus on performance and reliability.

EDUCATION

Vellore Institute of Technology (VIT), Chennai

2021 – 2025

B.Tech, Computer Science & Engineering

CGPA: 8.52 / 10

TECHNICAL SKILLS

Languages	Java, C++, TypeScript, SQL, Python
Backend	Spring Boot, Spring Security, Resilience4j, REST APIs, Postman, Maven, Git, Junit
Frontend	Angular 16+, RxJS, HTML5, CSS3, Bootstrap 5
Databases	MySQL, PostgreSQL, MongoDB, Redis, Liquibase
DevOps	Docker, Kubernetes, GitHub Actions, CI/CD
Concepts	Microservices, JWT, Kafka, RAG Pipelines, Vector Databases, Data Structures & Algorithms

PROFESSIONAL EXPERIENCE

Software Engineer

Jun 2025 – Present

LTM — Pune, India

- Migrated 8+ production microservices from **Java 8 to Java 21**, improving performance and maintainability
- Architected a rule-based eligibility engine serving **50,000+ users**, reducing offer evaluation latency
- Integrated **10+ SOAP/REST APIs** across distributed systems, reducing inter-service failures and application security
- Worked on the **Maker-Checker workflow** to enable controlled deletion of duplicate customer records.
- Collaborated in an Agile/Scrum environment through daily standups, and **peer code reviews** to ship high-quality features on schedule

PROJECTS

Spring Boot Microservices Architecture

GitHub

Java · Spring Boot · Spring Cloud · Eureka · API Gateway · Resilience4j · Kafka · Docker · Kubernetes

- Designed a **4-service distributed microservices** with Spring Cloud, demonstrating service decomposition and scalability
- Strengthened fault tolerance and observability by integrating Resilience4j circuit breakers and Zipkin distributed tracing, reducing **cascading failures**
- Containerized all services with Docker and orchestrated deployment on **Kubernetes** for elastic, scalable execution

API Rate Limiter

GitHub | Live

Java · Spring Boot · Redis · Spring AOP · Strategy Pattern · Docker · GitHub Actions

- Engineered a scalable request-throttling service protecting backend systems from abuse and **concurrent traffic spikes**
- Implemented **3 swappable algorithms** (Token Bucket, Sliding Window, Fixed Window) via the Strategy design pattern
- Validated quota correctness by stress-testing under **500+ concurrent requests** with Redis-backed shared state

TrainerHub

GitHub | Live

Java · Spring Boot · Angular 16 · MySQL · JWT · Spring Security · RBAC · JavaMailSender

- Developed a full-stack training management platform enabling companies to assign trainers, schedule programs, and collect feedback across **3 distinct user roles**
- Enforced **RBAC** at both Angular route-guard and Spring Security method level, Eliminating **unauthorized access**
- Optimized large-dataset rendering by server-side pagination, reducing page load time by **40%** through tuning

CineBook

GitHub | Live

TypeScript · Angular · Spring Boot · MySQL · JPA/Hibernate · JWT · Optimistic Locking

- Built a **high-concurrency** movie ticket booking platform where users can browse, select seats, and complete reservations
- Boosted Lighthouse performance score to **80+** by implementing Angular lazy loading, reducing initial load time by **45%**
