Summary

Full Stack Developer specializing in Java, Spring Boot, microservices and Angular with Experience in building scalable distributed systems with a focus on performance and reliability.

Education

Vellore Institute of Technology (VIT), Chennai – B.Tech, Computer Science & Engineering

May 2025

CGPA: 8.52 / 10

Experience

Software Engineer, Full-Stack

Jun 2025 – Present

LTIMindtree Limited

- Migrated 8+ production microservices from Java 8 to Java 21, enabling modern Spring Boot features and improving service performance and maintainability
- Designed a rule-based eligibility engine handling 30,000+ users, reducing offer evaluation latency and enabling dynamic rule configuration
- Integrated 10+ SOAP/REST APIs across distributed systems, reducing inter-service failures and improving reliability
- Delivered features in Agile/Scrum environment through sprint planning, standups, and peer code reviews

Projects

API Rate Limiter

GitHub | Live

Java · Spring Boot · Redis · Spring AOP · Token Bucket · Sliding Window · Fixed Window · Docker · GitHub Actions

- Built a scalable service to control client request volume, protecting servers from abuse and traffic spikes
- Reduced configuration overhead by supporting 3 swappable rate-limiting algorithms via a Strategy pattern, requiring zero controller-layer changes to switch strategies
- Validated quota correctness by stress-testing under 500+ concurrent requests with Redis-backed shared state

TrainerHub

GitHub | Live

Java · Spring Boot · Angular 16 · MySQL · JWT · Spring Security · RBAC · Bootstrap 5

- Built a web platform for companies to manage employee training programs, assign trainers, and collect feedback – accessible to 3 different user roles
- Eliminated unauthorized access by enforcing RBAC at both Angular route-guard and Spring Security method level
- Reduced page load time by 40% on large datasets by replacing client-side filtering with server-side pagination

Spring Boot Microservices Architecture

GitHub

Java · Spring Boot · Spring Cloud · Eureka · API Gateway · Docker · Zipkin · Resilience4j · Kustomize · Kubernetes

- Designed a 4-service microservices architecture using Spring Cloud, demonstrating how systems are structured at scale
- Improved fault tolerance and observability by integrating Resilience4j circuit breakers and Zipkin tracing, reducing cascading failures and debugging effort
- Eliminated configuration drift by managing Kubernetes manifests with Kustomize overlays for dev, staging, and prod
- Containerized services with Docker and deployed on Kubernetes for scalable execution

CineBook

GitHub | Live

TypeScript · Angular · Spring Boot · MySQL · JPA/Hibernate · JWT · Optimistic Locking · Lazy Loading

- Built a concurrent movie ticket booking platform where users can browse, select seats, and complete reservations
- Solved the double-booking problem by applying JPA optimistic locking with zero deadlocks under load
- Achieved a Lighthouse performance score of 80+ by implementing Angular lazy loading, reducing page load time by 45%

Skills

Languages: Java, TypeScript, SQL, Python

Backend: Spring Boot, Spring Security, JPA, Hibernate, REST APIs, Spring AOP, Spring Cloud, Resilience4j

Frontend: Angular 16+, RxJS, HTML5, CSS3, Bootstrap 5

Databases: MySQL, PostgreSQL, MongoDB, Redis, Liquibase

DevOps & Cloud: Docker, Kubernetes, Kustomize, GitHub Actions, CI/CD

Other: Microservices, JWT, OAuth2, RBAC, RAG Pipelines, Vector Databases, Git, JUnit, Postman, Kafka
